WELCOME !!!

Breastfeeding is an important women's issue, human rights issue, health issue and feminist issue. Breastfeeding empowers women. Women who wish to breastfeed their babies but do not, because of inadequate support from family or health workers, constraints in the workplace, or misinformation, often feel guilty because of this failure at something they wanted to do.

Breastfeeding your baby will bring you a joy that words cannot express. The feeling you get when you continue to nourish your baby at your breast and see your baby grow and thrive on your milk is awesome. Breastfeeding is a choice; We hope that you make the right choice to breastfeed your baby. There is no substitute for mothers milk.

According to the World Health Organization (WHO) and UNICEF about 1.5 million babies die every year because they were not breastfed. Many more millions suffer from infectious diseases and malnutrition, never reaching their full potential because they were bottlefed.

With education and support you can successfully breastfeed your baby, happily and healthily !!!!

<http://about>**IMPORTANCE OF BREAST FEEDING:**

- Breastfeeding protects babies
- Early breast milk is liquid gold
- Breast milk is easier to digest
- Breast milk fights disease
- Breastfeeding can save money
- Breastfeeding can be good for the mother's health, too

SOME INFO ABOUT MALNUTRITION.

Malnutrition is the condition that occurs when your body does not get enough nutrients. Malnutrition can occur if you do not eat enough food. Starvation is a form of malnutrition. Symptoms vary and depend on what is causing the malnutrition. However, some general symptoms include fatigue, dizziness, and weight loss.

ABOUT THIS INITIATIVE:

Breast feeding is very important for infants. We do not have proper data collection to know whether mothers are initiating breast feeds in first hour of life after birth and continuing till at least 6 months. The purpose of this module is to help government collect the data by building up a software based module so that doctor, nurse, mother or relative will give information about breastfeeding and introduction of solid foods, and the data thus collected can be analysed for further use.
